## DETAILED ACTION

### ***Allowable Subject Matter***

Claims 1-4 and 6-9 have been renumbered as 1-8 respectively.

Claims 1-8 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Hughes et al., US Patent No. 6,526,060 B1 discloses a method and system called Dynamic rate-based, weighted fair scheduler. Hoffman et al, US Patent No. 6,094,435, discloses a system and method for a quality of service in a multi-layer network element. Both Hughes and Hoffman do not teach or fairly suggest the following features, which are recited in each independent claim of the present application:

A network switch for switching packets from a source to a destination, said network switch including:

a source port for receiving an incoming packet from a source;

a destination port which contains a path to a destination for the packet; and

a programmable counter unit for counting a number of packets of selected packet types which are received by the switch wherein the programmable counter unit includes a rules table therein, said rules table storing rules which control packet flow based on values set in fields of a selected packet type, after a number of counted packets of a selected packet type exceeds a predetermined threshold and

a. wherein said rules table comprises a counter field, a filter value field, and a filter select field as recited in claim 1, or

- b. wherein the new code point action field may be set to a value for one of no action, assign a new code point, assign the new code point and change the priority of the selected packet, and drop the packet as recited in claim 8.
